

김형준 (Hyoungjoon “Paul” Kim)

Undergraduate at Electrical & Computer Engineering, Seoul National University

📍 Republic of Korea 🏠 jsvn7777@snu.ac.kr ✉ thekpaul000@gmail.com

🌐 thekpaul 🌐 in @thekpaul

Education

From Mar. 2018 BS in Electrical & Computer Engineering, Seoul National University
Expected to graduate in Summer 2024
Areas of Interest: System Programming, Digital Systems Design, Deep Learning
Graduation Project: Optimising the CNN Architecture with Hardware Design

Experience

From Mar. 2023 FPGA Engineer Intern for **NeuroRealityVision**
Dongtan, Republic of Korea

- Firmware, software development for MIPI-to-Ethernet integration
- Bare-metal, standalone FPGA application with interrupt-based workflow
- Real-time Ethernet packet capture and image rendering software development
 - Cross-platform development for Windows and Linux systems
 - Kernel-level optimisations in threading and system calls for faster processing speed
 - Direct modifications to system and network settings
- Custom IP development with Verilog-based RTL on Vivado

Jan. 2023 Student Intern for Dept. of System Semiconductor Engineering
to Jun. 2023 **Seoul National University**, Seoul, Republic of Korea

- Worked on CNN Architecture and Hardware Design Optimisation

Dec. 2019 KATUSA, Human Resources Specialist (42A)
to Jul. 2021 **94th Military Police Battalion**, Pyeongtaek, Republic of Korea

- Mandatory military service as a KATUSA Agent
(Korean Augmentation To the United States Army)

Skills

- | | |
|--------------------|--|
| Engineering | <ul style="list-style-type: none">• Experienced in system software engineering for Windows and Linux• Experienced in embedded systems design on multi-purpose SoC FPGAs• Capable of versatile development with C, C++ and Python• Capable of maintaining HTML/CSS front-end projects• Proficient in typesetting with \LaTeX |
| Languages | <ul style="list-style-type: none">• Korean: Native proficiency• English: Fluent, professional working proficiency |

Education

Bachelor's Degree: ECE, SNU

- Expected to graduate in Summer 2024
- **Graduation Project:** Optimising the CNN Architecture with Hardware Design
 - RTL development with Verilog
 - Pipelined, streaming CNN architecture concurrently running multiple convolution layers
 - Improved performance in faster speed and less memory usage without affecting end results
- **Areas of Interest:** System Programming, Digital Systems Design, Deep Learning

Key Courses Taken:

- Computer Organisation, Digital Systems Design: Basic RTL simulation and synthesis on FPGAs
- Operating Systems: System calls, tasks, multithreading and scheduling on the Linux kernel
- Other Computer-related Courses: Introduction to Data Structures, Introduction to Algorithms

Experience

FPGA Engineer Intern: NeuroRealityVision

- Firmware, software development for MIPI-to-Ethernet integration
 - Extract MIPI data from normal camera (CIS) and **event camera** (DVS) sensors to FPGA main memory
 - Experienced in hardware-firmware communication and interrupt handling mechanisms
 - * **PS** (Processing System): Xilinx Gigabit Ethernet Controller (GEM) and ARM Cortex-A53 Processor
 - * **PL** (Programmable Logic): Xilinx AXI 1G Ethernet Subsystem with multiple AXI DMA blocks
 - Experienced in server-side software development for communication with attached FPGA boards
ex. Ethernet packet parsing software to receive MIPI data and reconstruct image stream
 - Experienced in system software engineering with multi-threaded applications optimised for speed
 - * Cross-platform development for performance replications across multiple operating systems
 - * Direct interactions with various kernel and OS-specific ABI for streamlined performance
 - * Direct modifications to server system to enhance single-core and network performance
- Custom IP development with Verilog-based RTL on Vivado
 - Receive parallel data from attached event camera (DVS) sensor and reorganise for AXI4-Stream
 - Created block designs including RTL blocks to generate IP
 - Basic experience with generating functioning IPs based on block designs in Vivado
- Linux Server Management
 - Experienced in protocols such as VNC, SSH and RDP for remote work and automated services
 - System administration for wide range of hardware and software development toolkits

Student Intern: SSAI, SNU

- Research Interest: CNN Architecture and Hardware Design Optimisation
- In tandem with **graduation project** for bachelor's degree from ECE, SNU

KATUSA Human Resources Specialist

- Mandatory military service as a KATUSA Agent (Korean Augmentation To the United States Army)
- Human Resources Specialist (42A) for RSO HHD, 94th Military Police Battalion at Camp Humphreys

Skills

System Software Engineering for Windows and Linux

- Designing and implementing multi-threaded applications for pseudo-real-time workloads
- Thread-safe access to global data structures such as lists, queues and custom `class/struct` objects
- Cross-platform programming with preprocessor conditions for different operating system ABIs

Embedded Systems Design on Multi-purpose SoC FPGAs

- Designing firmware for bare-metal systems with interrupt-based workflow on Vitis 2021.2
- Basic RTL hardware design using Verilog with partial support for AXI4-Stream standards
- Automated digital systems design and layout with Vivado 2021.2
